Online acceptance of documents for training

Drilling a well for technical water on the territory of the university.

**Description:**

Greenhouse gas emission reduction program of Auezov University includes the following items:

1. The use of Eco Gazebo, Solar battery and Heliocamera is aimed at reducing emissions from Type 2 sources.
2. Reducing private car trips by reducing parking spaces as well as Sharing of transport. The university pays for student travel between campuses by minibus. The university offers free

bicycles and scooters for students to move around campuses and between campuses. This item aims to reduce emissions from type 3 sources.

3. The Department of Digitalization, together with the Admissions Committee, developed and implemented a project for online acceptance of documents for applicants to the University at the following levels: bachelor's, master's, doctoral studies. Documents are accepted in two languages. Thus, applicants can avoid traveling/flying to the university to apply for enrollment in person, and save emissions from cars, trains or planes. This paragraph is aimed at reducing emissions from type 3 sources.
